SUMMARY

Versatile Software Engineer with 5+ years architecting internal systems infrastructure, designing full-stack applications, and leading technical workflow automation. Specializes in JavaScript, Python, and relational database design, with a track record of bridging complex business logic and scalable software solutions. Adept at accelerating team throughput, deploying cloud-based tools, and optimizing legacy platforms in fast-paced Agile environments.

CORE SKILLS

Languages: JavaScript, TypeScript, Python, SQL, HTML5, CSS3
Frameworks & Libraries: React, Redux, Next.js, Node.js, Express, Flask, Sequelize, SQLAlchemy
Tools & Infrastructure: Docker, PostgreSQL, Git, Postman, Linux
AI: LLM APIs
Methodologies: Object-Oriented Programming (OOP), Test-Driven Development (TDD), Agile/Scrum
Systems & Operations: Workflow Automation, Systems Integration, Compliance Frameworks

PROFESSIONAL EXPERIENCE

Operations & Systems Manager | Pirani Properties

January 2025 - Present | Atlanta, GA

- Architected and managed digital infrastructure, scheduling platforms, and financial tracking systems across multiple multi-entity operations to streamline business efficiency.
- Coordinated cross-functional projects across software development assets, external vendors, and contractors to ensure critical operational and technical deadlines were achieved.
- Translated complex operational workflows and compliance data into automated digital pipelines to support organizational scaling and regional expansion.

Family Health & Operations Sabbatical

September 2023 - January 2025

- Stepped away from full-time engineering to navigate a major family transition requiring full-time caregiving and domestic management.
- Stabilized long-term household logistics and administrative accounts before cleanly re-entering the workforce.

Senior Software Developer | Southern Exteriors

May 2023 - September 2023

- Diagnosed severe latency in the application's search feature, tracing it to redundant database calls and over-fetching (loading 50 to 100 unoptimized records to render roughly 20 results), and recommended client-side caching and query and pagination optimizations to reduce database load.
- Introduced unit testing, with a planned integration-test suite, to catch regressions before production and address a recurring pattern of new features breaking existing functionality.
- Authored custom database queries to produce recurring business reporting the application could not generate natively.

Software Engineering Immersive | App Academy

March 2022 - August 2022

- Executed 950+ hours of rigorous training in full-stack web architectures, object-oriented programming, and test-driven development.
- Built and deployed scalable web applications using React, Node.js, Express, and Flask with secure relational database schemas.

Continuous Improvement Lead | iRepairIT

October 2018 - January 2022

- Designed and built a custom Discord bot (discord.js) integrated with Twilio, automating customer SMS notifications (appointment reminders, store locations, and parts-availability alerts) to drive repair-return traffic.
- Developed an interactive in-bot repair-cost calculator and employee reminder/task workflows to standardize quoting and internal coordination.
- Engineered a company-wide automated notification and training-compliance system (Trello webhooks + the Discord bot), driving training compliance from 64% to 98%.
- Automated monthly financial processing via advanced spreadsheet logic (+93.75% administrative throughput); built technical onboarding frameworks that scaled the workforce 3x while cutting annual turnover from 20% to 8.3%.

PROJECTS

GGCMaps: Interactive Campus Map (Team Lead) | github.com/avestech/ggcmaps.github.io

2017

- Led a 4-person team building an interactive, searchable campus map and wayfinding web application for Georgia Gwinnett College students; shipped to production at ggcmaps.com and adopted by students.
- Built in vanilla JavaScript (no framework) with location search and map interaction; open-sourced repository forked 24+ times.

EARLY CAREER

R5 Photo, LLC | Wedding Photographer / Team Lead (2008-2016)

Visible Name, LLC | Web Developer & SEO / Embroidery Machine Operator (2007-2015)

EDUCATION

B.S. Information Technology - Software Development

Georgia Gwinnett College

Software Engineering Immersive, App Academy (950+ hours, Aug 2022)

ADDITIONAL

Languages: English (Native), Spanish (Native), French (Intermediate)

Certification: App Academy, 950+ Hour Software Engineering Curriculum
